Description

The DP-4000 is a precision differential pressure transmitter with a stainless steel case and a stainless steel sensor. This transmitter is designed for use in applications where accuracy and reliability are essential. The transmitter is available in a variety of models and configurations to meet your specific requirements.

Output: The transmitter provides a 4-20 mA output signal. The output signal is proportional to the differential pressure across the sensor. The transmitter is also available with a 0-5VDC output signal. The transmitter is also available with a 0-10VDC output signal.
