

Sliding gate valves

Type shaft

Our sliding gate valves are available in two shaft options: a standard shaft and a long shaft. The standard shaft is designed for use in applications where the valve is installed in a vertical position.

The long shaft option is designed for use in applications where the valve is installed in a horizontal position. The long shaft option is available in two lengths: 1.5m and 2.0m.

Straight through flow

The straight through flow design allows for a direct path of flow through the valve. This design is ideal for applications where the valve is installed in a horizontal position.

Short stroke, fast response

The short stroke design allows for a quick response to changes in flow. This design is ideal for applications where the valve is installed in a horizontal position. The short stroke design is available in two lengths: 1.5m and 2.0m.

Easy to maintain

The sliding gate valve is designed for easy maintenance. The valve is made of high quality materials and is built to last. The valve is easy to inspect and maintain. The valve is designed for easy maintenance.

Quiet operation

- 1. The sliding gate valve is designed for quiet operation. The valve is made of high quality materials and is built to last. The valve is easy to inspect and maintain. The valve is designed for easy maintenance.
