

- Easy to transport
- Full range
- Temperature resistant material
- Different kind of pipette
- High temperature stable
- Electronic pipette

DESCRIPTION

Electronic pipettes are used for precise liquid transfer. The electronic pipette is used for the entire range. It has a built-in pipette tip and a pipette tip. It is used for the entire range. It is used for the entire range. It is used for the entire range.

TECHNICAL DATA

The multi-channel pipette and pipette tip are used for the entire range.

FEATURES

The multi-channel pipette is used for the entire range.

ADVANTAGES

The multi-channel pipette is used for the entire range.

DISADVANTAGES

The multi-channel pipette is used for the entire range.

APPLICATIONS

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.

The multi-channel pipette is used for the entire range.
