Application

The 2-rod collection is used to collect samples from very shallow depths (up to 100 m) in the water column. They are used to collect samples of water, plankton, and other organisms.

Models

2-rod 1000
Collecting instrument for shallow depths (up to 100 m) in the water column.

2-rod 2000
Collecting instrument for shallow depths (up to 200 m) in the water column.

2-rod 3000
Collecting instrument for shallow depths (up to 300 m) in the water column.

2-rod 4000
Collecting instrument for shallow depths (up to 400 m) in the water column.
