

## Flow:

1. Air enters at the top of the trachea and goes into the bronchi. From there, it reaches the lungs and is used.

2. After it is used, it goes back into the trachea and is exhaled out of the body.

## Flow:

1. Air enters at the top of the trachea and goes into the bronchi. From there, it reaches the lungs and is used.

2. After it is used, it goes back into the trachea and is exhaled out of the body.

3. The air then goes into the lungs and is used. From there, it reaches the trachea and is exhaled out of the body.

4. The air then goes into the lungs and is used. From there, it reaches the trachea and is exhaled out of the body.
