

# Pressure, Level and Volume Sensor L3

3000000000

## Key features

- 24-hour level measurement to help the user identify and replace
- 24-hour pressure logging and upload to the cloud
- 24-hour level volume data transmission to the cloud

## Number of sensors

Up to 10 sensors can be connected to the device for security, safety and health monitoring.

## Key technology / components

- Pressure sensor (range 0-100 cm H<sub>2</sub>O)
- Level sensor (range 0-100 cm)
- 24-hour pressure logging
- 24-hour level volume logging
- 24-hour level volume data transmission to the cloud
- 24-hour pressure logging and upload to the cloud
- 24-hour level volume logging and upload to the cloud
- 24-hour level volume data transmission to the cloud

## Notes

- 24-hour level volume logging and upload to the cloud
- 24-hour pressure logging and upload to the cloud
- 24-hour level volume logging and upload to the cloud
- 24-hour level volume data transmission to the cloud
- 24-hour pressure logging and upload to the cloud
- 24-hour level volume logging and upload to the cloud
- 24-hour level volume data transmission to the cloud
- 24-hour pressure logging and upload to the cloud
- 24-hour level volume logging and upload to the cloud
- 24-hour level volume data transmission to the cloud
- 24-hour pressure logging and upload to the cloud
- 24-hour level volume logging and upload to the cloud
- 24-hour level volume data transmission to the cloud

## Applications

24-hour level volume logging and upload to the cloud

## Working principle of the sensor

The sensor is a pressure sensor that measures the pressure of the liquid in the container. The sensor is connected to the device and the device will log the pressure data and upload it to the cloud. The sensor is also connected to the device and the device will log the level data and upload it to the cloud. The sensor is also connected to the device and the device will log the volume data and upload it to the cloud.
