

Level Sensor with M12 Thread Hygienic

Application Areas

Level monitoring of liquid and granular media in vessels and plants with stainless steel (V2A, V4L) and titanium equipment for the food and pharmaceutical industry, as well as in the chemical and petrochemical industry.

Application Advantages

- High accuracy of level measurement in the range 0 mm to 200 mm
- High degree of protection & process hygiene (IP69K) for hygienic use
- Easy cleaning (sanitary design, stainless steel, smooth surface)
- High accuracy & precision
- High reliability & durability
- Low maintenance
- Low operating & holding costs

Application Advantages

- High accuracy & precision and stability
- Stainless steel (V2A, V4L) and titanium
- High degree of protection & process hygiene (IP69K)
- Easy cleaning (sanitary design, stainless steel, smooth surface)
- High accuracy & precision
- High reliability & durability
- Low maintenance
- Low operating & holding costs

Application Advantages

- High accuracy & precision and stability
- Stainless steel (V2A, V4L) and titanium
- High degree of protection & process hygiene (IP69K)
- Easy cleaning (sanitary design, stainless steel, smooth surface)
- High accuracy & precision
- High reliability & durability
- Low maintenance
- Low operating & holding costs

Application Advantages

- High accuracy & precision and stability
- Stainless steel (V2A, V4L) and titanium
- High degree of protection & process hygiene (IP69K)
- Easy cleaning (sanitary design, stainless steel, smooth surface)
- High accuracy & precision
- High reliability & durability
- Low maintenance
- Low operating & holding costs
