

## Use indicator

The pH indicator will turn red when the solution is acidic. The color change is a visual indicator of the presence of hydrogen ions in the solution. The color change is a visual indicator of the presence of hydrogen ions in the solution. The color change is a visual indicator of the presence of hydrogen ions in the solution.

## Procedure

### Use pH indicator

#### Procedure

1. Add a few drops of the indicator to the solution.
2. Observe the color change.
3. Record the color.
4. Repeat the procedure for the other solutions.
5. Compare the results with the known pH values.
