

The filter head is a common feature on the front of the pump. It is usually made of plastic and is designed to hold the filter. The filter head is usually made of plastic and is designed to hold the filter. The filter head is usually made of plastic and is designed to hold the filter. The filter head is usually made of plastic and is designed to hold the filter.

Structure

The structure of the pump is designed to be compact and efficient. It consists of a motor, a pump head, and a filter head. The motor is usually made of metal and is designed to be durable. The pump head is usually made of plastic and is designed to be lightweight. The filter head is usually made of plastic and is designed to be easy to clean.

Process

The process of using the pump is simple. First, you need to fill the filter with water. Then, you can turn on the pump. The pump will draw water from the filter and pump it out. The filter will catch any debris or sediment in the water. The pump will continue to pump water until the filter is full or the pump is turned off.
