

HYDROBAR

- AVAILABLE IN 10' TO 150' RANGE
- STAINLESS STEEL CONSTRUCTION
- EXCELLENT LINEAR RANGE STABILITY (±0.1% FS)
- TEMPERATURE COMPENSATED
- ZERO-SHIFT ALGORITHM
- HYDROBAR 10' TO 150' RANGE

DESCRIPTION

The "Hydrobar" series are submersible level transmitters with a range of 10' to 150' depth. To measure the level in reservoirs, deep wells, hydroelectric dams, coastal waters etc.

The "Hydrobar" transmitters are available in three large liquid fill cells or full stainless steel and wet.

All "Hydrobar" are fully temperature compensated, and are built with strong full stainless steeling to ensure excellent long term stability.
