

## Overview

### Features

- Continuous level measurement of solids and liquids in standard applications in nearly all industries with all 500 FRISCO radar
- Suitable for measurement of solids in silos, auger-filled containers, open containers, open hoppers and bunkers
- Suitable for measurement of liquids in storage tanks and for water treatment
- Measurement through the roof of a tank is possible as well

### Measurement range

Up to 100m (328.084ft)

### Materials

- Housing and antenna made of PTFE for high chemical resistance
- All wiring of the antenna is isolated
- Cable mounting kit to facilitate process connection
- Accessories for further mounting options

### Service

- Plug antenna system, simple installation and commissioning
- Pre-wiring, communication interface and standard mode (SIL)

### Options

- Designed for use in hazardous locations (Zone 0 and 1)
- Available fluid versions

## Application

### Solids measurement

Arriving of the antenna in the center of the silo allows measurement down to the bottom

### Liquids measurement

Vertical installation without arriving of the antenna
